                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /SIDS2/9cgdata/geneseqp-emb1/AA1989_DAT:*

definition in a salve as a cargerator pure are transference to the salve as a cargerate to the salve as a cargerate to the salve as a cargerate to the salve as a query sequence to perform searches against sequence at 15sues that express the nuclear hormone receptor. The nucleic acids may be used as a query sequence to perform searches against sequence at tabases to identify family members or related sequences, as probes or primers, to construct recombinant vectors, to identify compounds that modulate nuclear hormone receptor nucleic acid expression, in gene therapy, and as antisense constructs to control nuclear hormone receptor gene expression in cells, tissues or organisms. The polypeptides can be cased to raise antibodies or to elicit an immune response, as a reagent in assays designed to determine protein levels in biological fluids, as markers for tissues in which a corresponding protein is expressed, to identify a binding partner/ligand to develop a system for the cidentification of inhibitors of the binding partner/ligand to assays, and to identify compounds that modulate protein activity. This sequence represents the human nuclear hormone receptor protein of the
                                                                                                                                                      The invention relates to an isolated peptide of a novel human nuclear hormone receptor with a fully defined sequence of 457 amino acids given in the specification. The novel human nuclear hormone receptor peptides and nucleic acids encoding them can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic

```
acid receptor (RAR)-alpha protein. The gene encoding this protein is disrupted in a translocation of a portion of the long arm of chromosome 17 (115:17)(q21;q11-22)]. This causes a fusion RAR-alpha and myl which is characteristic of acute promyelocytic leukemia (APL). The breakpoint region has been cloned and it has been shown that DNA rearrangements are clustered in the region of the first intron of RAR-alpha. This sequence was isolated by polymerase chain reaction (PCR). The primers used for amplification of this sequence can also be used to amplify the translocated region.
                                                                                                                    Retinoic acid receptor; RAR-alpha; myl; acute promyelocytic leukemia; APL; translocation; chromosome 17; chromosome 15; PCR; primer; [t(15;17)(q21;q11-22)]; breakpoint; polymerase chain reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence given represents the amino acid sequence of the retinoic

This truncated cDNA, designated RAR-alpha-403, encodes a protein (AAR86024) containing the N-terminus, DNN-binding domain and part of the hormone-binding domain of RAR-alpha (AAR68023).

The protein can also be used to identify a subject with indications of APL who will not respond to treatment with all-trans retinoic acid.

                        The invention relates to a method for modulating activity of a thyroid which fits spatially and preferentially into a thyroid hormone ligand which fits spatially and preferentially into a thyroid hormone ligand binding domain. The aromatic compound (of a specified formula) can be used to increase alpha glecrophosphate dehydrogenase (GPDH) levels, at lavels which do not significantly modify cardiac GPDH levels and are indicated in the treatment of obesity. The compound also lower total blasma cholesterol and triglyceride levels and can be used as anti-hypertriglyceridaemic agents. The compound may also be used for treating thereozerosis and may be indicated in thyroid hormone replacement therapy in patients with compromised cardiac function. Sequences AAV21621-636 amino acid sequences of ligand binding domains of several members of the nuclear receptor superfamily.
                                                                                                                                                                                                                                                                                                                                                                                  SNH-----SIETQSSSSEEIVPSPPSPPPLPRIYKPCFVCQDKSSGYHYGVSACEGC 103

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG30010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GYHYGVSACEGCKGFFRRSIQKNMVYTCHRDKNCIINKVTRNPCQYCRLQKCFEVGMSKE 151

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymertase chain reaction (PER) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its binding antipodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conditional or and active sequences. Absoloulor-Absology represent novel human diagnostic anno acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed product in the printed or the condition of the condition 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 22; Length 563;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         86.7%; Score 2112; DB 22;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                        The sequence given shows a fusion between retinoic acid receptor (RAR)-alpha and myl which is characteristic of acute promyelocytic leukemia (APL). This is caused by a translocation of a portion of the long arm of chromosome 17 onto the long arm of chromosome 15 [t(15;17)(q21;q11-22)]. The breakpoint region has been cloned and has been shown that DNA rearrangements are clustered in the region of the first intron of RAR-alpha. This sequence was isolated by polymerase chain reaction (PCR) using primers which correspond to sequences both 5' and 3' to the breakpoint region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIETQSSSSEEIVPSPPSPPPLPRIYKPCFVCQDKSSGYHYGVSACEGCKGFFRRSIQKN

This sequence represents a human myl/RAR-alpha (retinoic acid receptor alpha) fusion protein which is used in a method for identifying a subject with acute promyelocytic leukaemia (APL) resulting from a t(15:17) translocation who will respond to treatment with all-trans retinoic acid. The protein can also be used to identify a subject with indications of APL who will not respond to treatment with all-trans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                55 SIETQSSSSEEIVPSPPSPPLPRIYKPCFVCQDKSSGYHYGVSACEGCKGFFRRSIQKN 114

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, complete the reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as to foologinal expression or supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed setting in the content of the content of the content of intectly from WIPO at the content of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             115 MYTCHRDKNCIINKVTRNPCQYCRLQKCFEVGMSKESVRNDRNKKKKEVPKPECSESYT 174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            55 SIETQSSSSEEIVPSPPSPPPLPRIYKPCFVCQDKSSGYHYGVSACEGCKGFFRRSIQKN 114

An 11.5 day-old total mouse embryo lambda gtl0 cDNA library was screened with labelled human RAR-alpha probes. Positive clones were isolated, mapped and sequenced. A set of mRAR-alpha clones was identified on the basis of a 98 percent homology of their cDNA-deduced amino acid sequence with that of human RAR-alpha. There are 8 amino acid substitutions (mostly conservative) between the human and mouse sequences. See also AARIO548, AAQI0388-9 and AAQI0405-8.

To proteins of mouse. This sequence represents the RAR-alpha sequence. The murine RAR-gamma sequence was used in the isolation of human RAR-gamma.

To murine RAR-gamma sequence was used in the isolation of human RAR-gamma.

RAR-gamma is a retinoic acid inducible transcription factor, and issues specifically in the skin where it is the predominant RAR. The control of the protein are the most highly conserved regions of the protein are the most highly conserved regions.

To and the E region is the ligand binding domain. The B region is also and the E region is the ligand binding domain. The B region is also conserved within species. The N and C terminal regions of segment D region is thought to act as a hinge region. Regions A and F remot conserved within a given species. The A, B, D and F regions are conserved across species, suggesting that they have specific functions, but are not required for the RAR's specific phylaological roles. The protein is used to detect competitive and non-competitive agonists and receptor expression in normal and diseased tissues and cultures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in compactics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

Patent No. US20020049151A1
GENERAL INFORMATION:
APPLICANT: Murphy, Evelyn
APPLICANT: Dresnihan, Barry
APPLICANT: Conneely, Orla
APPLICANT: Fitzgerald, Oliver
TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppression of the NURR
TITLE OF INVENTION: Subfamily of Nuclear Transcription Factors
                                                                                                                       | | | | : : : | | : : | | : : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | | : | : | | : | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 35, Application US/09853386
Patent No. US20020049151A1
GENERAL INFORMATION:

APPLICANT: Murphy, Evelyn
APPLICANT: Conneely, Orla
APPLICANT: Conneely, Orla
APPLICANT: Fitzgerald, Oliver
TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppression of the NURR
TITLE OF INVENTION: Subfamily of Nuclear Transcription Factors
CURRENT APPLICATION NUMBER: US/09/853,386
CURRENT FILING DATE: 2001-05-11
PRIOR PILING DATE: 2000-05-12
NUMBER OF SECIENCE: 2000-05-12
NUMBER OF SECIENCE: 2000-05-12

Sequence 37, Application US/09853386

Patent No. US20020049151A1

GENERAL INFORMATION:

APPLICANT: Murphy, Evelyn

APPLICANT: Bresnihan, Barry

APPLICANT: Conneely, Orla

APPLICANT: Conneely, Orla

TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppression of the NURR

TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppression of the NURR

TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppression of the NURR

TITLE OF INVENTION: Subfamily of Nuclear Transcription Factors

CURRENT FILING DATE: 2001-05-11

PRIOR FILING DATE: 2000-05-12

NUMBER OF SEQ ID NOS: 153

SOFTWARE: PATENTI VERSION 3.1

SEQ ID NO 37

LENGTH: 598
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16;

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

center project Information
center clone name: L27554
center clone name: L27554
center clone name: 1029_L16
sequencing vector: plasmid; n/s; 100% of reads
Sequencing vector: plasmid; n/s; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
consensus quality: 187624 bases at least 030
consensus quality: 187650 bases at least 030
consensus quality: 187650 bases at least 020
Insert size: 187000: agarose-fp
Insert size: 188074; sum-of-contigs
Quality coverage: 14.6 in 020 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              51471 66014: contrg of 100 bp

* NOTE: This is "Working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

KEOD human CDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; CDNA full insert sequencing:

Research Association for Biotechnology (RAB); CDNA library

CONSTRUCTION: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- 6 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

NOTE: This is a "working draft' sequence. It currently consists of 72 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                            2 (bases 1 to 162393)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS2/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:*/SIDS2/gcgdata/geneseq/geneseqn-embl/NA2001B.DAT:*/SIDS2/gcgdata/geneseq/geneseqn-embl/NA2002.DAT:*

```
The invention relates to an isolated peptide of a novel human nuclear hormone receptor with a fully defined sequence of 457 amino acids given in the specification. The novel human nuclear hormone receptor peptides and nucleic acids encoding them can be used as models for the development of human therapeutic of human therapeutic targets, aid in the identification of therapeutic of human therapeutic agents that modulate nuclear hormone receptor activity in cells and tissues that express the nuclear hormone receptor activity in cells and tissues that express the nuclear hormone receptor. The nucleic acids may be used as a query sequence to perform searches against sequence databases to identify family members or related sequences, as probes or primers, to construct recombinant vectors, to identify compounds that modulate nuclear hormone receptor nucleic acid expression, in gene therapy, and as antisense constructs to control nuclear hormone receptor gene expression in cells, tissues or organisms. The polypeptides can be used to raise antibodies or to elicit an immune response, as a reagent in assays designed to determine protein levels in biological fluids, as markers for tissues in which a corresponding protein is expressed, to identify a binding partner/ligand to develop a system for the clentification of inhibitors of the binding reaction, in drug screening assays, and to identify compounds the memoral protein activity. This polynucleotide sequence represents the genomic DNA encoding the human polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 CCCCTCCTCCAGGGGTATCCCCTCTTTCTAGGGACCTACCCAAGCTAGGCCTTTCTTCCA 120

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADFN, or AFDI and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is useful for the diagnosis or therapy of diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated

development genes, in particular disease related to homeobox containing genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related with the development of the brain and limb girdle muscular dystrophy and dwarfism. Oligomers specific to each of the genes are useful for detecting the methylation state of all CPG dinucleotides within the 350 sequences or (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements and as oligomer probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPS).

Note: The sequence data for this parent did not form part of the printed specification but is based on sequence information supplied to Derwent by

AAD30228 standard; DNA; 53522 BP

```
The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADRN, or AFD1 and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is useful for the diagnosis or their complements. The invention is development genes, in particular disease related to homeobox containing genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related to histone deacetylation, Currarino syndrome, diseases related to dispensers specific to each of the genes are useful for detecting the methylation state of all CPG dinucleotides within the 350 sequences or (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, as primer oligonucleotides for the amplification of the 350 sequences, as primer oligonucleotides for single nucleotide polymorphisms (SNPs). (II) and/or their complements and so oligomer probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs).

Whose: The sequence data for this patent did not form part of the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   6959 TTTTATTACGGTTTCGTTAGGGATTGATTAAATTTTGGGGGAGTTTGGGAGGTCGG 7018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6839 AGGGTAGTTTAGCGAGAGTTTAGTCGTATTGTATTAGGTAAATGAGGTTCGGTTTGGGTG 6898

The present invention relates to compositions and methods useful for the identification and detection of polycystic kidney disease (PKD1) gene mutations. The invention also relates to primers comprising a 5' region having a sequence that selectively hybridises to a PKD1 gene sequence and on optionally, to a PKD1 homologue sequence and an adjacent 3' region having a sequence that selectively hybridises to a PKD1 gene sequence and not to a PKD1 homologue sequence. Primer pairs of the invention are useful for detecting the presence or absence of a mutation in a PKD1 cuseful for detecting the presence or absence of a mutation in a PKD1 polyuncleotide in a sample, for identifying a subject at risk for a PKD1-associated disorder such as autosomal dominant polycystic kidney disease (ADPKD) or acquired cystic disease and for diagnosing a PKD1-associated disorder in a subject. They are useful for selectively aspititying a region of a PKD1 gene. PKD1 DNA fragments are useful cetecting the presence of a mutant PKD1 polynucleotide in a sample, as a probe for an amplification reaction, in hybridisation or amplification assays of biological samples to detect abnormalities of PKD1 expression and for engineering transgenic animals. The present sequence is human PKD1 gene chromosome 16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel primer for diagnosing polycystic kidney disease-associated disorder, comprises regions having sequence that selectively hybridizes to polycystic kidney disease gene sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; PKD1 gene; autosomal dominant polycystic kidney disease; ADPKD; acquired cystic disease; transgenic animal; chromosome 16; ds.

The PKD1 gene or polypeptide may be used to treat autosomal dominant polycystic kidney disease (APKD), and identify carriers of mutant PKD1 genes, i.e. subjects susceptible to APKD. Antibodies (AD) that distinguish between normal and mutant PKD1 sequences can also be used in diagnostic tests. Anti-PKD1 AD may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKD1. Ab are also useful in rational drug design studies to identify and test inhibitors of PKD1. Sense and antisense sequences derived from the PKD1 gene may

The present sequence is that of the normal human PKDI gene from chromosome 16, wutations in this gene (e.g. transitions, transversions, deletions and/or insertions) are associated with adult-onset polycystic kidney disease (APKD). The PKDI locus is GC-rich (62.4%). Comparison of this sequence with a previously reported partial cDNA sequence revealed differences at three locations (see features table). The most significant difference is the presence of two additional cytosine residues on the plus-strand at position 4566 of the previously reported sequence. The insertion essuits in a frame-shift in the predicted protein coding sequence. Cleading to replacement of 92 C-terminal amino acid with a novel consisting of 17 tandem copies of a perfect 27 bp repeat and two large CT-rich regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCCCCCCCCTCTTCCGTCCTTGTCCCCTCGCAGCCCCTCCTCTCCCTGTACTCGGCGT 884

Human PKD1 locus between chromosomal markers ATPL (ATP6C) and D16S84.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the human polycystic kidney disease I (PKD1) locus between chromosomal markers ATPL (ATP6C) and D16S84. The PKD1 gene or polypeptide may be used to treat autosomal dominant polycystic kidney disease (APKD), and identify carriers of mutant PKD1 genes, i.e. subjects susceptible to APKD. Antibodies (Ab) that distinguish between normal and mutant PKD1 sequences can also be used in diagnostic tests. Anti-PKD1 Ab may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKD1. Ab are also useful in rational drug design studies to identify and test inhibitors of PKD1. Sense and antisense sequences derived from the PKD1 gene may used for

The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and
conditions and all sequence flanking regions, intron-exon borders, the
initiation codons, genomic flanking regions, intron-exon borders, the
conditions and all segments of RNAs encoding proteins associated with one
conditions and all segments of RNAs encoding proteins associated with one
cor more diseases, conditions or mixtures. The antisense oligonuclectides
cor more diseases, conditions or mixtures. The antisense oligonuclectides
cor more diseases, conditions or mixtures. The antisense oligonuclectides
antisense transment of diseases and conditions. Typical diseases and
conditions are those associated with impaired respiration and
conditions are those associated with impaired respiration and
inflammation, including lung diseases, pulmonary vasoconstriction,
condition, allergic rhinitis, acute asthma, allergies, asthma, impeded
respiration, respiratory distress syndrome, pain, cystic fibrosis,
cuspiration, pulmonary disease (COPD), and cancers such as leukemias,
lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer,
constructive pulmonary disease (COPD), and cancers such as leukemias,
lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer,
constructive pulmonary was well as all types of cancers which may metastasize
cor have metastasized to the lungs, including breast and prostate cancer.
acute asthma; allergy; asthma; impeded respiration; respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; hepatocellular carcinoma; kidney cancer; melanoma; hepatic metastasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides used in treatment of, e.g. pulmonary

The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and
non-coding regions of RNAs corresponding to target genes, gene
initiation codons, genomic flanking regions, intron-exon borders, the
confidence diseases, conditions or mixtures. The antisense oligonucleotides
cor more diseases, conditions or mixtures. The antisense oligonucleotides
cor more diseases, conditions or mixtures. The antisense oligonucleotides
conditions are those associated with impaired respiration and
conditions are those associated with impaired respiration and
inflammation, including lung diseases, pulmonary vasoconstriction,
inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded
respiration, respiratory distress syndrome, pain, cystic fibrosis,
constructive pulmonary disease (COPD), and cancers such as leukemias,
lymphomas, carctionmas e.g. colon cancer, bepacter, lung cancer,
constructive pulmonary disease (COPD), and cancers such as leukemias,
lymphomas, carctionmas e.g. colon cancer, bepacter, melanoma,
conflammatic cancer, hepatocellular carcinoma, kidney cancer, melanoma,
chepatic metastasise, as well as all types of cancers which may metastasize
cor have metastasized to the lungs, including breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
